

High Performance Connectors

Designed to support the Perfect Search Appliance (PSA) and the Perfect Search OneBox Extender (OBX), these high performance connectors, designed by Perfect Search, support most major file types. These connectors enable the search of specific databases, email systems, and CMS systems with blazing speed and precision—including crawlers for web pages.

Perfect Search Connectors are designed to be highly cost-effective and handle tremendous throughput of data—less time spent in creating the index, with data being immediately available for search.

OBX-Microsoft Exchange Appliance Connector

Perfect Search's Microsoft Exchange Appliance Connector empowers organizations to efficiently index and search massive amounts of Microsoft Exchange data, utilizing a cost-effective OBX appliance. The OBX by Perfect Search, with its ability to seamlessly federate data through an existing Google Search Appliance, enables Google clients to extend the reach of their search into Exchange data and the vast majority of all other disparate content repositories.

Perfect Search High Performance Connectors are available to support the following:

DATABASE

Oracle
MS SQL Server
MySQL
IBM DB2
Informix
PostgreSQL

EMAIL

MS Exchange
IBM LotusNotes

CMS

MS SharePoint
Documentum
Microsoft Access
IBM Filenet

OTHER

Dell DX Object Storage
RSS/Atom Feed

Would you like to super-charge the performance of your existing Google Search Appliance?

You can do so by pairing Perfect Search's OneBox Extender (OBX) with the GSA—seamlessly and cost-effectively—enabling enormous databases and email content to be indexed and retrieved with precision at incredible speeds. In its largest configuration, the GSA can index and search 30 million documents. By simply adding Perfect Search's OBX, data sets with up to 1 billion structured or unstructured records can be indexed and searched at speeds that are ten times faster than Google's stand-alone solution. Perfect Search's OBX gives enterprises room to grow without having to add additional hardware.

Note: The Perfect Search Appliance and the Perfect Search OneBox Extender each include one connector license.
