

...affordable search
for small business

Challenge

With data exponentially increasing, small and medium size organizations are clamoring for solutions to find business-critical data. SMB's are confronted with the same challenge faced by large enterprises: the need to find stored electronic information with speed and precision. It is difficult enough to find documents on one's PC, let alone the need to search through thousands if not millions of documents to find an important report created months or even years ago. Because of the complexity and high costs associated with search, SMB's have been unable to realize the same search benefit that large enterprises have been able to afford... *until now.*

Easy to Use Solution

Breaking new ground, Perfect Search's revolutionary technology brings affordable search to small and medium-sized business. **Insight**, powered by Perfect Search, is a game-changing search solution designed specifically for SMB's, as well as departments within an organization. **Insight** is an affordable and easy-to-use search appliance: An intuitive set-up interface enables installation, implementation, and selection and indexing of vast amounts of data—completed in minutes rather than days. In order to conduct a data search, a user-friendly search screen allows users to instantaneously find a document by typing a keyword or phrase. By clicking on the file name, the data is retrieved. **Insight** is the first search appliance that delivers ease of use and affordability. Providing unparalleled *insight* into stored data, **Insight**, powered by Perfect Search, equips small and mid-size businesses with the performance

The Industry's Premier SMB Search Technology Solution!

enhancing and cost-saving ability to find the information they need when they need it.

Affordable

How affordable is **Insight**? Consider this: For under \$8,000, **Insight** allows a user to index and search approximately 1 million documents. You would pay close to \$50,000 to search a million documents using Google's solution. **Insight** allows you to search the same number of documents at one-sixth of the cost. Moreover, where installation and implementation are concerned, there is no need for expensive, dedicated IT search personnel. Your system administrator can easily install the **Insight** search appliance. When it comes to searching stored data, **Insight**, powered by Perfect Search, is the affordable choice for small and medium size business, delivering unmatched speed, precision and performance.

Find the information you need when you need it.™

Scalability and Performance

As a scalable solution, **Insight**, powered by Perfect Search, is capable of searching 250K to 2M documents with absolute accuracy and relevancy. Vast amounts of data are searched with unparalleled speed. Rather than waiting for hours or even days, structured and unstructured data is found in milliseconds. Perfect Search's highly acclaimed search technology is known in the enterprise market as the fastest, most scalable and most precise search solution in the world. This same technology is now available for small and medium size businesses. Installed on either

an office environment appliance or on a rack mounted server, Insight is the "perfect search" solution for small and medium size business.
