

Search Packager™

Challenges

You need to archive sets of data from your hard drive. You may not recall the title, but you need to quickly search for and find a specific document, keyword or phrase within the document. You're out of the office but need immediate access to business-critical data that is stored on your desktop PC or on your network. Even if you copy this data to a USB drive or DVD, you still have to wade through hundreds or thousands of file names—a tedious and ineffective process.

Portability

4 GB of information equates to approximately five four-drawer filing cabinets of information. Search Packager provides finger-tip access to this amount of information, equipping you with the ability to find the exact documents needed with accuracy, relevance, and speed. Search Packager is ideal for the user on the go.

Ease of Use

With the end user in mind, the Search Packager was designed to be easy to install. A user-friendly keyword search screen makes finding and retrieving data extremely simple.

Solution

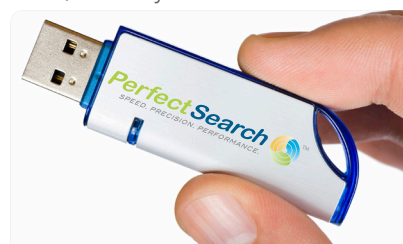

Search Packager by Perfect Search provides the optimal solution—it enables instantaneous access to 4, 8, or 16 GB of information stored on an USB drive or DVD. With Perfect Search's built-in search interface, the specific content of documents, by keyword or phrase, can be found at blazing speeds. Search Packager is also an excellent tool for archiving. Archived data is saved and indexed on a USB or DVD, onto which Perfect Search's search engine is pre-loaded. It's simple to use, giving you instant access to unlimited archived data by inserting the USB or DVD into your PC.

Multiple Document Type Search

Search Packager is vendor neutral when it comes to document search—it allows users to find documents created by different applications using a single query. Virtually any searchable document type can be searched, located and retrieved. Word documents, emails, email attachments, or images with meta-data tags—Search Packager will find the information you need with speed and precision.

How Search Packager Works

Search Packager is a single-user software solution designed to create portable data search packages. Search Packager allows users to select data, create an indexed data set (package), and store it on a removable 4 GB, 8 GB, 16 GB USB drive or DVD. When the media is inserted into a PC, laptop or tablet, an easy-to-use search screen allows you to quickly find and retrieve the specific data needed from the removable drive. Unlimited USB drives and DVDs can be prepared.

Find the information you need when you need it.™

Use Case Scenarios

John Turner is a lawyer who spends considerable time in the courtroom. Documents are digitally stored at his firm. John uses Search Packager to copy the equivalent of five four-drawer filing cabinets of legal documents onto a 4 GB USB drive. Search Packager builds an index on the USB drive so the data can be quickly searched. At a court hearing, John realizes he needs access to a critical document. By simply inserting his Search Packager USB drive into his laptop, a simple to use search screen appears. By typing a key word or phrase, John finds the required document instantaneously. John wins the case!

A superintendent on a construction site needs to search architectural specifications and find every instance where a certain building component installation is required. Search Packager is the ideal portable solution.

Search Packager: the permanent pain killer for the "I can't find the file" headache.

Standard Search Packager*		
Model	Sized	Notes
SP-4G-STD	4 GB	20% of media used for index, search engine etc.
SP-DVD-STD	4.7 GB	20% of media used for index, search engine etc.
SP-8G-STD	8 GB	20% of media used for index, search engine etc.
